## **Realistic Car Controller Scripts**

#### RCC.cs

Explained in separate document (Realistic Car Controller API).

#### RCC AlBrakeZone.cs

Brake Zones are meant to be used for slowing AI vehicles. If you have a sharp turn on your scene, yo u can simply use one of these Brake Zones. It has a target speed. AI will adapt its speed to this target speed while in this Brake Zone. It's simple.

#### RCC\_AlBrakeZonesContainer.cs

Used for holding a list for brake zones and drawing gizmos for all of them on Editor.

#### **RCC AlCarController.cs**

Al Controller of RCC. It's not professional, but it does the job. Follow all waypoints or chases the player. Must be attached to the root of the vehicle. RCC\_CarControllerV3.cs will not receive any input from player when this script is attached to the vehicle.

#### RCC AlWaypointsContainer.cs

Used for holding a list for waypoints and drawing gizmos for all of them.

## RCC\_APIExample.cs

An example script shows how the RCC API works. Uses the RCC.

## RCC\_Caliper.cs

Rotate the brake caliper. Must be attached directly to brake caliper gameobject. Corresponding wheelcollider must be selected per caliper.

## **RCC Camera.cs**

Main RCC Camera controller. Includes 7 different camera modes with many customizable settings. It doesn't use different cameras on your scene like \*other\* assets. Simply it parents the camera to their positions, that's all. Also supports collision detection.

## RCC CameraCarSelection.cs

Used on the camera at "RCC City Car Selection" scene for orbiting camera.

## RCC\_CrashHammer, RCC\_CrashPress, RCC\_CrashShredder

Used on the machines at "RCC City Damage" scene. Physically operates the machine.

## RCC\_CarControllerV3.cs

Main vehicle controller that includes Wheels, Steering, Suspensions, Mechanic Configuration, Stabilit y, Lights, Sounds, and Damage. All In One script.

## RCC\_ChangableWheels.cs

Changes wheels (visual only) at runtime. It holds changable wheels as prefab in an array.

## RCC\_CharacterController.cs

Animates Driver Sofie (Credits to 3DMaesen). Simply feeds floats and bools of Sofie's animator component.

#### RCC\_CinematicCamera.cs

Tracks the car and keeps orientation nicely for cinematic angles. It has a pivot gameobject named "A nimation Pivot". This gameobject has 3 animations itself currently.

#### RCC\_CreateAudioSource.cs

Creates new audiosources at runtime with specified settings.

#### **RCC\_Customization.cs**

Main Customization Class For RCC.

## RCC\_CustomizerExample.cs

A simple customizer example script used for receiving methods from UI elements and sending them to RCC\_Customization script. Also updates all UI elements for new spawned vehicles too.

#### RCC DashboardColors.cs

Changes HUD image colors by UI Sliders.

#### RCC\_DashboardInputs.cs

Receiving inputs from active vehicle on your scene, and feeding dashboard needles, texts, images.

#### RCC\_DashboardObjects.cs

Receiving inputs from active vehicles on your scene, and feeds visual dashboard needles.

## RCC\_Demo.cs

A simple manager script for all demo scenes. It has an array of spawnable player vehicles, public methods, setting new behavior modes, restart, and guit application.

## RCC\_DemoVehicles.cs

Stores all demo vehicles of the RCC. It's a scriptable object.

## RCC\_DetachablePart.cs

Attached to all detachable parts of the vehicle. Works with Configurable Joint. Strength of the part reduces with the impact. If it's weak enough, part will be loosen, or detached entirely.

## RCC\_Exhaust.cs

Exhaust based on Particle System. Based on vehicle engine RPM.

#### **RCC\_FixedCamera.cs**

Fixed camera system for RCC Camera. It simply parents the RCC Camera, and calculates target positi on, rotation, FOV, etc...

#### **RCC FuelStation.cs**

Fills the fuel tank of the vehicle. Works with trigger colliders. If any RCC vehicle enters the trigger, the fuel tank of the vehicle will be filled up with x refill speed. Must be attached to the trigger colliders.

#### RCC FOVForCinematicCamera.cs

Animation attached to "Animation Pivot" of the Cinematic Camera is feeding FOV float value.

## RCC\_GetBounds.cs

Gets total bound size of a gameobject.

#### **RCC GroundMaterials.cs**

Configurable Ground Materials are collected in an array of class.

## RCC\_HoodCamera.cs

RCC Camera will be parented to this gameobject when current camera mode is Hood Camera.

## RCC\_MobileUIDrag

Mobile UI Drag used for orbiting RCC Camera.

#### **RCC InfoLabel**

An UI Text to inform the player.

#### **RCC\_InputActions**

Input Actions map generated by the editor.

#### RCC InputManager

Receives player input with Unity's New Input System. Instead of using many hardcoded lines, only one line will do the whole job with the new Input System. Listening to all events on RCC\_InputActions.

#### **RCC Inputs**

Input class for throttle, steer, brake, handbrake, nos, gear, clutch, orbit, etc.

## RCC\_Light.cs

General lighting system for vehicles. It has all kinds of lights such as Headlight, Brake Light, Indicator Light, Reverse Light.

#### **RCC\_LightEmission.cs**

Feeding material's emission channel for self-illumine effect.

## RCC\_Mirror.cs

It must be attached to an external camera. This external camera will be used as a mirror.

## **RCC\_MobileButtons.cs**

Receiving inputs from UI buttons, and feeds active vehicles on your scene.

## **RCC\_PoliceSiren.cs**

Flashes red and blue lights with proper timing. If vehicle is an AI vehicle and chaser vehicle, toggles lights on / off automatically.

## RCC\_Recorder.cs

Record / Replay system. Saves player's input on record and replays it when on playback.

#### **RCC\_RepairStation**

Repairs the vehicle. Works with trigger colliders. If any RCC vehicle enters the trigger, it will be repaired. Must be attached to the trigger colliders.

#### RCC\_SceneManager.cs

Scene manager that contains current player vehicle, current player camera, current player UI, current player character, recording/playing mechanim, and other vehicles as well.

## RCC\_Settings.cs

Stored all general shared RCC settings here.

## RCC\_ShadowRotConst.cs

Locks rotation of the shadow projector to avoid stretching.

#### RCC\_Skidmarks.cs

Skidmarks Manager for RCC.

## RCC\_SuspensionArm.cs

Rotates and moves suspension arms based on wheelcollider suspension distance.

#### RCC\_Telemetry.cs

Attached to the telemetry canvas to display all important vehicle stats on game view.

#### **RCC** Teleporter

Teleports the target vehicle to the new position. Works with trigger colliders. If any RCC vehicle enters the trigger, it will be teleported. Must be attached to the trigger colliders.

#### RCC\_TrailerAttachPoint

Attachable trailers and trucks must have these trigger boxes. Must be attached to little box triggers inside the vehicle and trailer. If both of them trigger each other, trailer and vehicle will be connected. Basically, attach, connect positions of the trailer and vehicle.

## RCC\_TruckTrailer.cs

The truck trailer has additional wheelcolliders. This script handles the center of mass of the trailer, wheelcolliders, and antiroll.

#### RCC\_UIController.cs

UI input (float) receiver from UI Button.

## RCC UIDashboardButton.cs

UI buttons are used in options panel. It has an enum for all kinds of buttons.

## RCC\_UIDashboardDisplay.cs

Handles dashboard elements.

#### RCC\_UIJoystick.cs

UI Joystick controller with horizontal and vertical inputs for mobile controller.

## RCC\_UISliderTextReader.cs

Receives float from UI Slider and displays the value as a text.

#### RCC\_UISteeringWheelController.cs

UI Steering Wheel controller.

## RCC\_Waypoint.cs

Single waypoint of the AI. Created by RCC\_WaypointManager. Each waypoint has target speed. AI will adapt its speed to this target speed while getting closer.

## RCC\_WheelCamera.cs

RCC Camera will be parented to this gameobject when current camera mode is Wheel Camera.

## RCC\_WheelCollider.cs

Based on Unity's WheelCollider. Modifies a few curves, settings to get stable and realistic physics depends on selected behavior in RCC Settings.

# **Photon Scripts**

## RCC\_PhotonDemo.cs

A simple scene

manager script for photon demo scene. It has an array of networked spawnable player vehicles, public methods, restart, and quit application.

## RCC\_PhotonManager.cs

Connects to Photon Server, registers the player, and activates player UI panel when connected.

## RCC\_PhotonNetwork.cs

Syncs each vehicle. Streams player input or receiving data from server. And then feeds the RCC.
